

VRXSE Screamin' Eagle® Destroyer™

In-Use

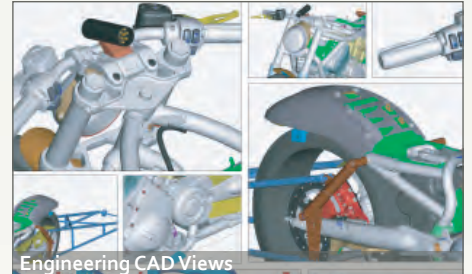

Engine Close-Up

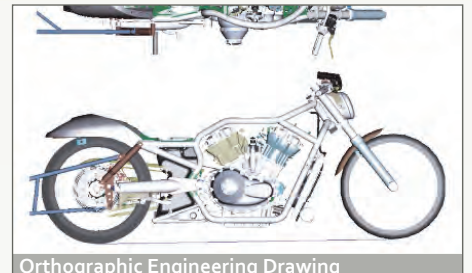

Wheelie Bar Attachment Close-Up

The VRXSE Screamin' Eagle® Destroyer™ is Harley Davidson's first out-of-the-box, drag racing motorcycle. Rider accommodations include a mini instrument panel, forward race position risers, a drag handlebar, handlebar controls designed for drag racing and an emergency shut-off tether. Rear-set foot pegs and a brake lever are positioned on the swing arm. The race seat features a high-rise back cushion. Based on the VRSC™ family and tuned by Custom Vehicle Operations, this bike can do a quarter mile run in less than ten seconds.

The Destroyer is based on the V-Rod platform and is a race-only vehicle with a target market of die-hard drag racers. A team of five BSI engineers executed the design and development of all non-standard V-Rod components for this vehicle. All components were designed, engineered and tested on an highly accelerated timeline. ■
